Title. Assuria Auditor AutoUpdate #98 released

Introduction This update is an Assuria content update. The update is compatible with, and suitable for application to all Assuria Auditor agents.

Contents

Customisable email from addresses An enhancement to allow the use of a customised email address as the 'from' address when sending emails from the Assuria Auditor Console. This feature is required when working with email systems such as Microsoft Exchange 2007.

The email address is specified using a new 'Email' tab added to the 'Maintenance->Options' menu item. The other existing customisable fields relating to the sending of emails by the console (the address of the server to be used, and the email format) have been moved from the 'Reporting' tab to the 'Email' tab.

These changes have no impact on the sending of emails from Assuria Auditor Agents. These are controlled through the 'alert config' dialog below the appropriate agent in the console's tree.

A facility to customise the 'from' address is already present for these emails.

VMware ESX – 'vmconfig' baseline policy report Enhanced reporting from the vmconfig baseline policy on VMware ESX 3.5. The functionality has been split up into more checks in order to produce a clear tabular output.

Remote Adapter: Refresh Tree A new 'Refresh Tree' menu item under the 'View' menu, to allow refreshing of the console's tree display to include changes made outside the execution context of the console, for example by the remote adapter.

Console host information Minor updates to the Assuria Auditor Console to improve the way it indicates whether a host has an agent, is scanned by the remote adapter, or is the result of an imported results file.

Bug corrections Bug fixes to the Assuria Auditor Console to correct errors in handling the saving of various items to classes, where those classes included hosts without installed agents; for example hosts scanned by the remote adapter or hosts created by the

import result file functionality.

A bug fix to the Assuria Auditor Console to honour the setting of the option 'Show checks without vulnerabilities' to false, in the XML based HTML and PDF reports.
