

Assuria Auditor RA

Key features of Assuria Auditor RA

- Remote agent-less internal host scanning
- Policy Compliance, Configuration Assurance and Vulnerability Assessment reports
- Integrated, optional component of Assuria Auditor
- Uses current Assuria Auditor knowledge base
- Uses current Assuria Auditor Checks and Policies
- Includes secure credential store facility
- Results stored in Assuria Auditor Console database
- Integrated Assuria Auditor agent and agentless scans.

Configuration assurance, vulnerability assessment & compliance - agentless

All the power and flexibility of Assuria Auditor's industry leading configuration assurance features now available using remote agentless technology.

Integrated with the Assuria Auditor Console, RA uses the same database, checks, policies and reporting as the current Assuria Auditor agents.

Scanning support is currently available for:

- Windows Server 2003,
- Windows Server 2008 R2,
- Windows Server 2008,
- Windows 7,
- Red Hat Enterprise Linux 5,
- SuSE Linux Enterprise (SLES) systems.

Assuria Auditor RA performs internal scanning and uses securely stored credentials to login to the target host. Once logged-in, the RA software can obtain 'host-based' system data running as privileged user, just as if it were resident on the target host.

The dedicated RA user interface is installed and runs alongside the Assuria Auditor Console providing mixed mode scanning operations.

The Assuria Auditor RA user interface provides facilities to:

- Create and manage the Credential Stores used to securely store system credentials required to access the target hosts.
- Add hosts or systems to be scanned.
- Create sessions -a mapping of Assuria Auditor Policies to target hosts.
- Run sessions - scan configured hosts or target systems.
- Monitor and view session progress.
